Stage Area 9m x 4m

Stage Requirements

Above is a scale layout of The Tribute Show's stage set-up. The aerial diagram shows examples of three different sized stages. Please note when using the smaller stage areas, the lighting rig will still extend above and beyond the stage area. In addition please allow for the bands speaker system which is not shown.

- **Small (White Area):** 5m wide by 3m deep
- **Medium Stage(Light Blue):** 7m wide by 3.5m deep
- **Large Stage (Blue area):** 9m wide by 4m deep

Venue size is never a problem, from small function suites to theatres and even football stadiums! The ultimate aim is to be accommodating without restricting the show or compromising audience enjoyment.

Changing Room

A changing room is required fairly close to the stage for quick costume changes, secure enough to store the bands costumes & personal valuables. This room also serves as somewhere for band members to remain discretely anonymous before showtime.

Power Requirements

Here are some recommended Power Supplies:

- **Ideal Power:** 32 Amps of Three Phase Power
- **Alternative:** Two Separate 32 Amp Sockets
- **Or:** One 32 Amp Socket & One 13 or 16 Amp
- **Minimum:** Two 13 Amp sockets on separate ring mains

Can the show run from generators?

Yes. Ideally this needs to be a three phase supply or at least a minimum of two separate phases of 32 Amps solely for the use of The Tribute Show's equipment. If in doubt please contact the band. It is also recommended that there is a backup source of power or an appropriate technician on call for the duration of the event.

The Tribute Show can supply a large generator and portable outdoor staging for an additional fee.

Refreshments

The Tribute Show do not expect refreshments. However, some soft drinks and maybe a light bite to eat are always appreciated if available. Please note that the band do not drink alcoholic beverages before their performance!
